

Shoreline and Riparian Condition Assessment

Ponoka County

RIPARIAN
WEB PORTAL

December 2021

Ponoka County Summary: Your Shoreline and Riparian Condition Assessment

Purpose of this Report

This report presents information about the condition of riparian areas in your County. Results can be used to inform planning, conservation, and restoration efforts by municipalities and partners. More detailed results can be found in the attached appendix, as well as through the Riparian Web Portal (riparian.info).

Riparian Areas 101: Why They Matter

Riparian areas are transitional areas between a waterbody and the adjacent upland area.

Improve water quality by trapping sediments, filtering nutrients and pollutants, reducing aquatic plant and algal growth

Mitigate floods and droughts by storing and slowing the release of water and reducing erosion

Improve biodiversity by providing fish and wildlife habitat and cooling water temperatures

Provide aesthetically pleasing areas for recreation or cultural activities

Add economic value by increasing property values or providing areas for nature viewing

To learn more about the importance of riparian areas, please go to:
riparian.info

Project Partners

This work has been carried out by the Watershed Planning and Advisory Councils (WPACs) in your area:

What is Riparian Intactness?

Illustration by: Terra Simieritsch

Riparian intactness is a measure of how “natural” a shoreline is. Riparian intactness measures riparian condition at a broad scale, using satellite data. This is a new method, which has been scientifically validated, to assess riparian conditions across a large area in Alberta.

How to Use This Information

- To compare the condition of water bodies or watersheds across a region
- To prioritize restoration and conservation efforts
- To complement field-based assessment methods by showcasing broad-scale results
- To guide voluntary stewardship efforts by municipalities, community groups, and landowners

Beneficial Management Practices for Municipal Leaders

Ensure that your municipality has policies for sufficient development setbacks and buffers of native plants to safeguard water bodies

Encourage and support landowners and community initiatives to maintain and improve riparian areas through water and land stewardship groups

Utilize and enforce policy tools such as Environmental Reserves, Conservation Reserves and Conservation Easements to ensure that hazard and sensitive lands are not developed

Eliminate or control invasive species in municipal riparian areas and promote natural and native species along shorelines

Minimize erosion, maintain slopes and prevent disturbance in or close to riparian areas

Educate the public about recreational use impacts and why some activities are restricted to specific places or seasons

What is Intactness?

- o Intactness is a measure of riparian condition at a broad scale (watershed or region)
- o Measures if natural habitat has been altered or impaired by human activity
- o Measures the quantity of natural and woody vegetation, as well as human footprint, using satellite data

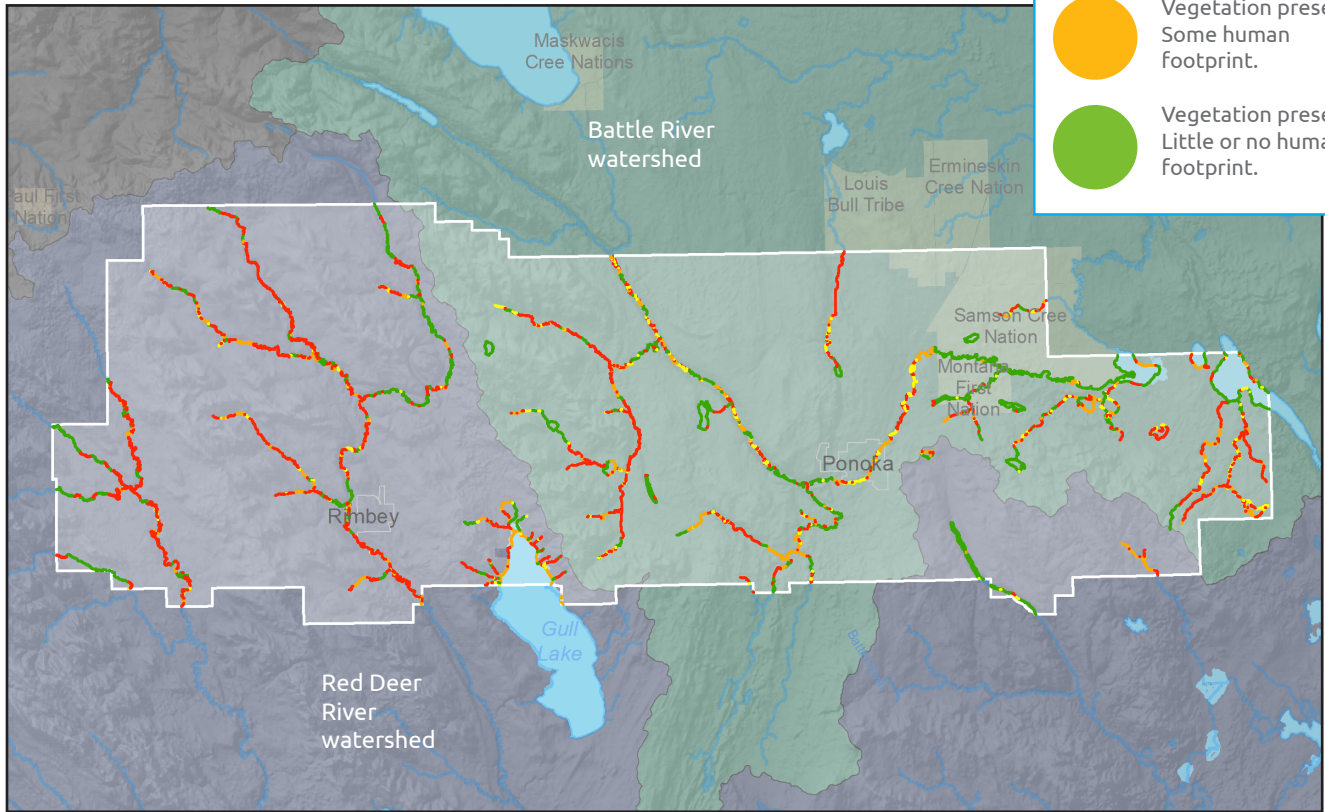

Intactness Results for Ponoka County

1,455 KM
of shorelines
assessed in
Ponoka County

13/22
lakes had 65%+
High Intactness

4/42
creeks had 65%+
High Intactness

Intactness Ratings	
	Vegetation mostly cleared. Human footprint dominant.
	Vegetation limited. Human footprint prevalent.
	Vegetation present. Some human footprint.
	Vegetation present. Little or no human footprint.

*Map 1: Riparian Intactness in the County.
To view more data, please see the [Appendix](#).*

Ponoka County Overall Intactness

What is Catchment Pressure?

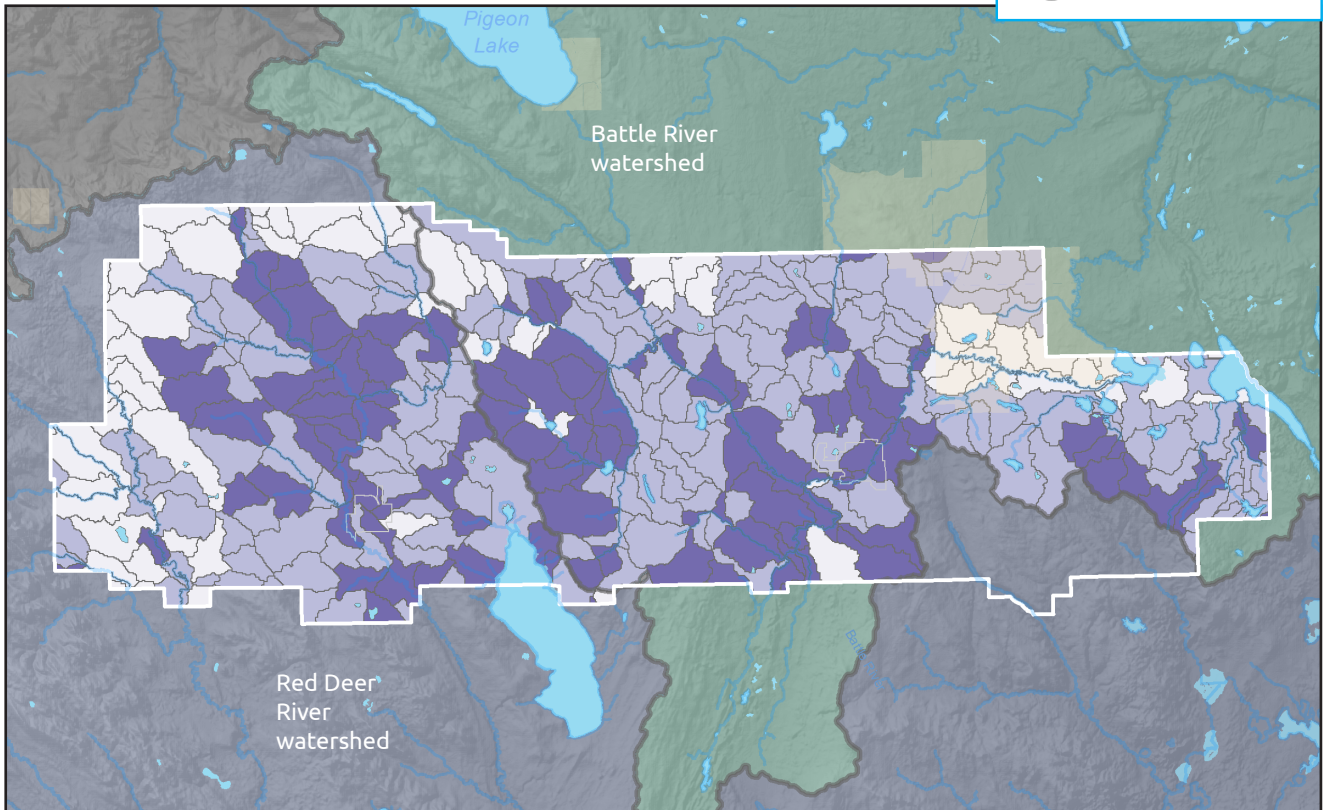

- o Indicates pressures on the landscape that might impact riparian health
- o Includes natural stressors (e.g. slope, forests) and human stressors (e.g. land-use intensity)
- o High pressure = high potential stress for riparian areas. Data was collected to inform prioritization dataset

Catchment Pressure Results for Ponoka County

2,802
KM²
of land assessed

Pressure Ratings

- High Pressure
- Moderate Pressure
- Low Pressure

Map 2: Catchment Pressure in the County.

Note that some areas were not assessed. To view more data, please see the [Appendix](#).

Ponoka County Overall Pressure

30%
High

47%
Moderate

24%
Low

What is Prioritization?

- o Combines intactness scores and pressure scores to highlight which riparian areas are most affected by landscape pressures
- o Conservation rating is prioritized where riparian intactness is high and landscape pressure is low
- o Restoration rating is prioritized where riparian intactness is low and landscape pressure is high

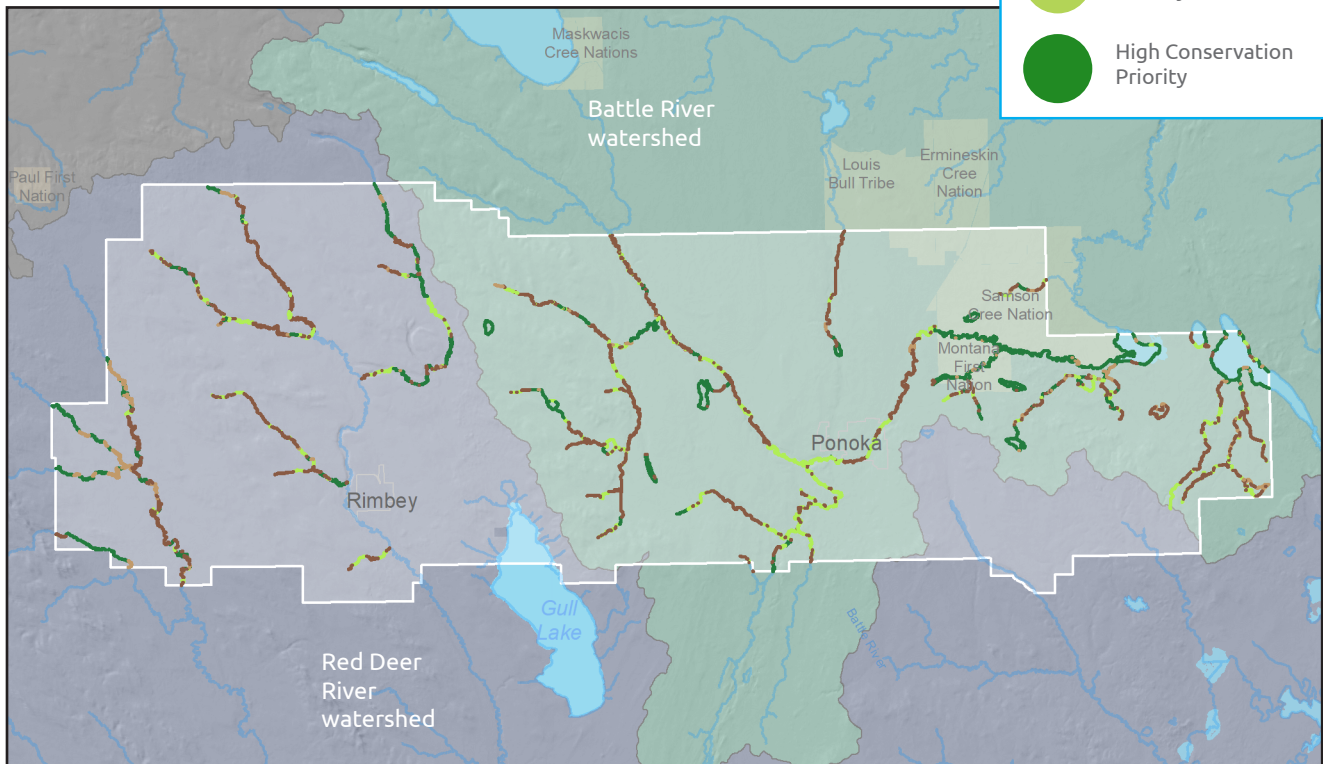

Prioritization Results for Ponoka County

1,014 KM
of shorelines
assessed in
Ponoka County

430 KM
of high
restoration
priority

391 KM
of high
conservation
priority

Priority Ratings	
	High Restoration Priority
	Moderate Restoration Priority
	Moderate Conservation Priority
	High Conservation Priority

Map 3: Restoration and Conservation Priorities in the County.

Note that some areas were not assessed. To view more data, please see the [Appendix](#).

2. **Named Creek:** Blindman River
3. **Unnamed Creek:** Battle River-01

Conservation

4. **Lake:** Samson Lake
5. **Unnamed Lake:** UL-090101-11
6. **Named Creek:** Lloyd Creek
7. **Unnamed Creek:** Battle River-03

Map 4: The top Conservation and Restoration Priorities recommended for the County. Recommendations are based on the top results from the Prioritization assessment shown in Map 3. To view more data, please see the [Appendix](#).

Next steps to conserve or restore priority riparian habitats:

- 1 Use priority maps to direct conservation and restoration efforts.
- 2 Develop policies at the municipal level for land management.
- 3 Provide incentives for private landowners to restore degraded riparian habitats.
- 4 Restore and conserve riparian habitats through municipal reserves, land trusts and/or conservation groups.

See the [Appendix](#) for a comprehensive list of priorities. To find out more about riparian condition data and resources, go to: riparian.info

Acknowledgments

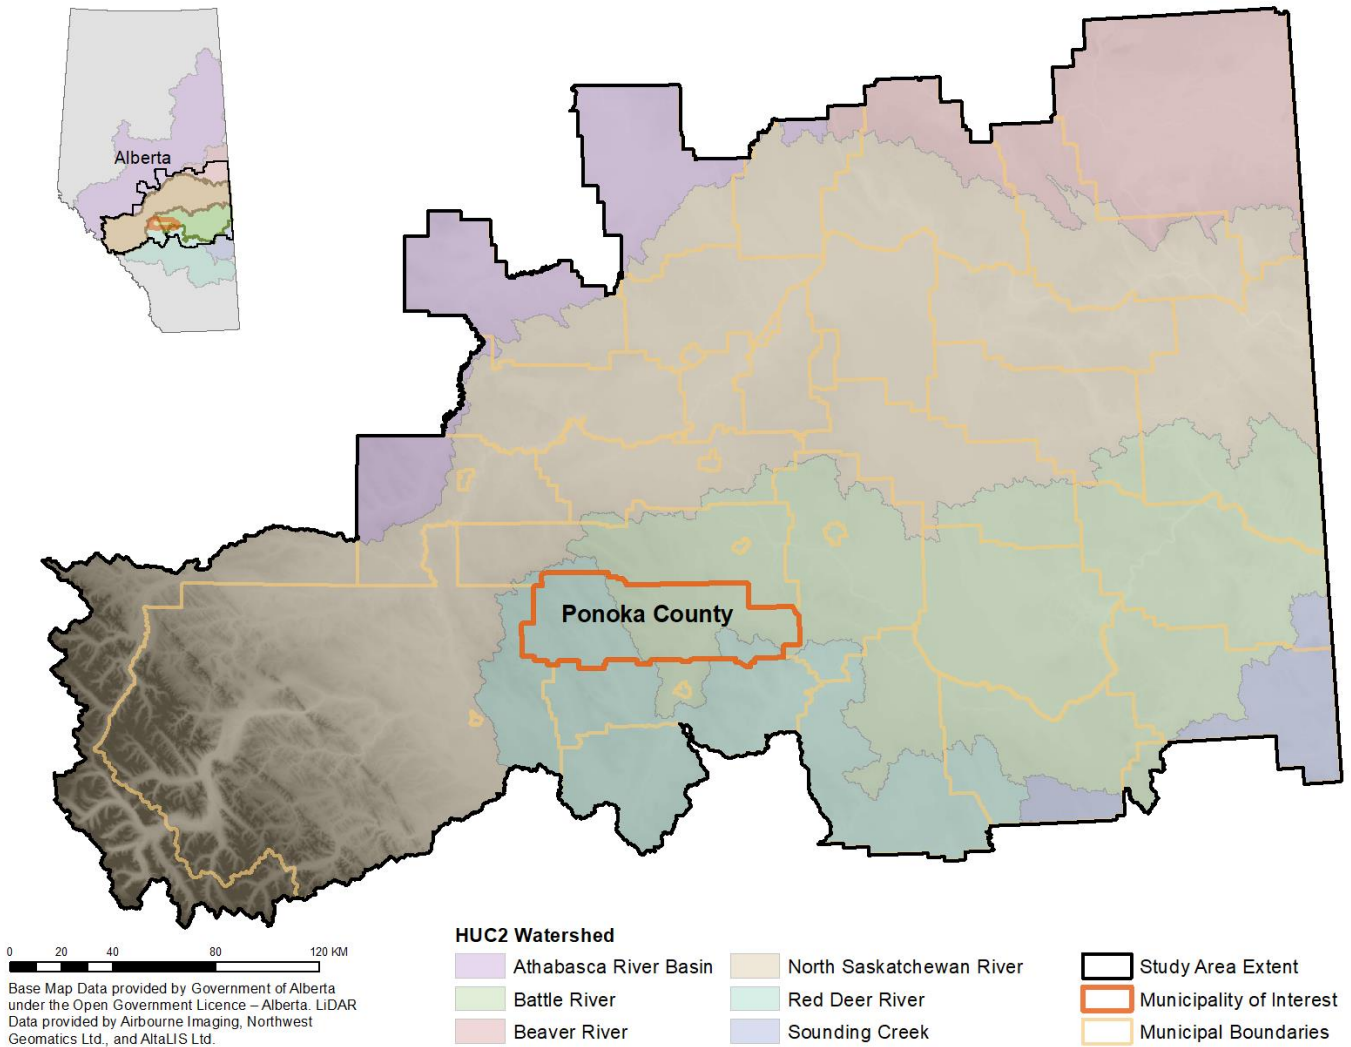

This work was an inter Watershed Planning and Advisory Councils (WPAC) project with funding and support from many sources. A special thanks to the Watershed Resiliency and Restoration Program and the governments of Canada and Alberta, through the Canadian Agricultural Partnership.

Intactness, Pressure, and Prioritization data was created by Fiera Biological Consulting Ltd. Base Map Data was provided by the Government of Alberta.

D21. Ponoka County

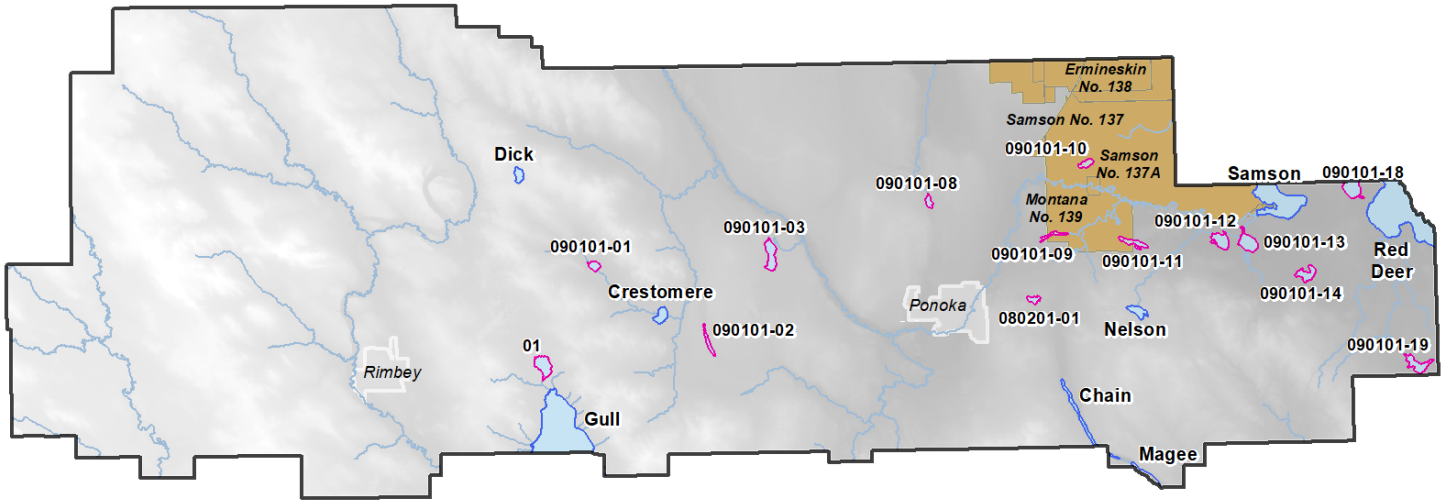

1.1. Municipal Overview

1.2. Shorelines of Interest

Location of Waterbodies Assessed within the Municipality

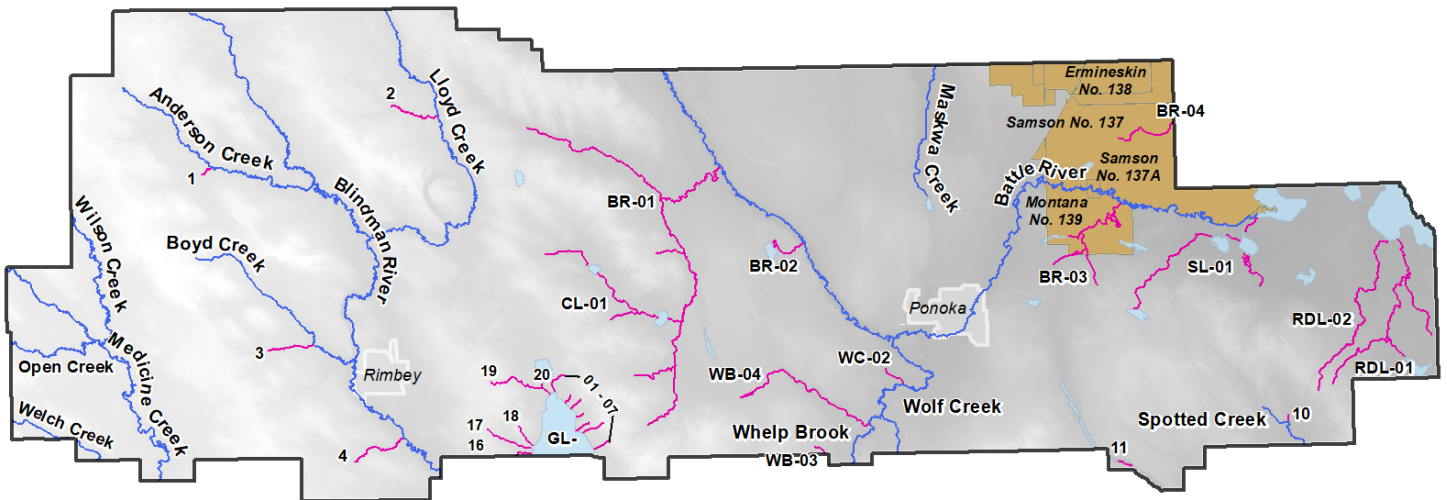

Waterbodies Assessed

- Named Lake
- Unnamed Lake

0 4 8 16 24 KM

Base Map Data provided by Government of Alberta under the Open Government Licence – Alberta. LiDAR Data provided by Airbourne Imaging, Northwest Geomatics Ltd., and AltaLIS Ltd.

Waterbodies Assessed

- Named Stream
- Unnamed Creek

0 4 8 16 24 KM

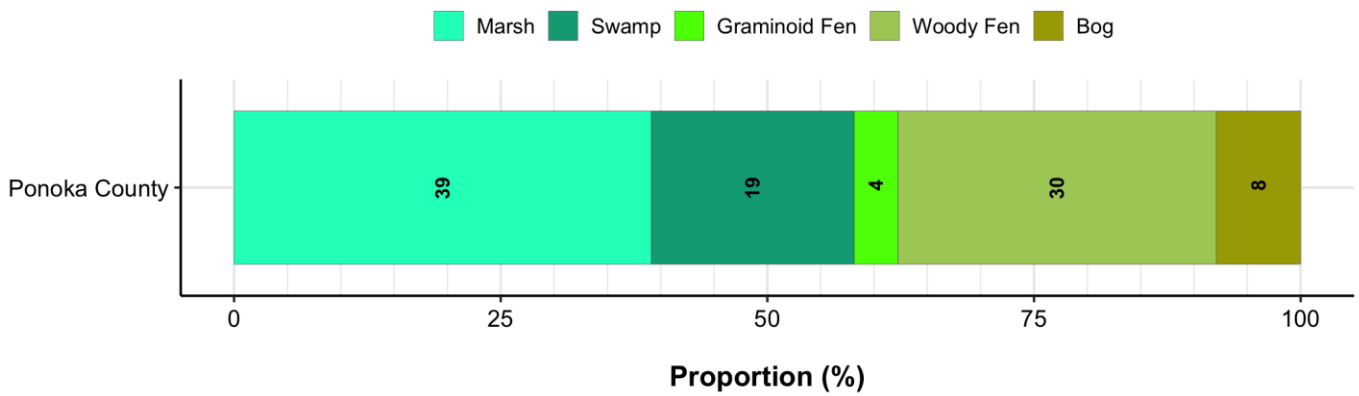

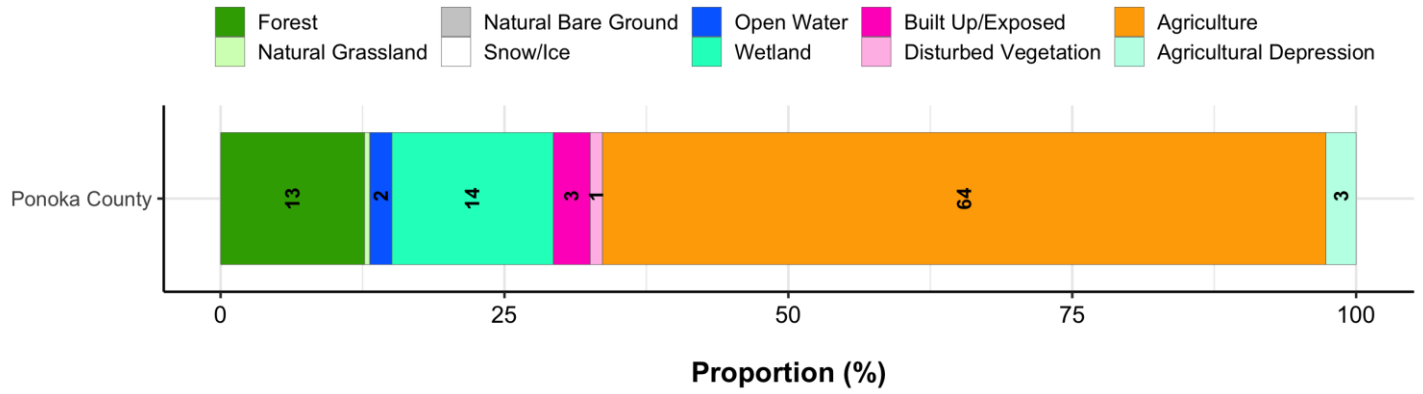

Base Map Data provided by Government of Alberta under the Open Government Licence – Alberta. LiDAR Data provided by Airbourne Imaging, Northwest Geomatics Ltd., and AltaLIS Ltd.

Total Length of Riparian Shoreline Assessed within the Municipality

NOTE: Numbers indicate the total length (km) of shoreline assessed by waterbody type.

1.3. Land Cover

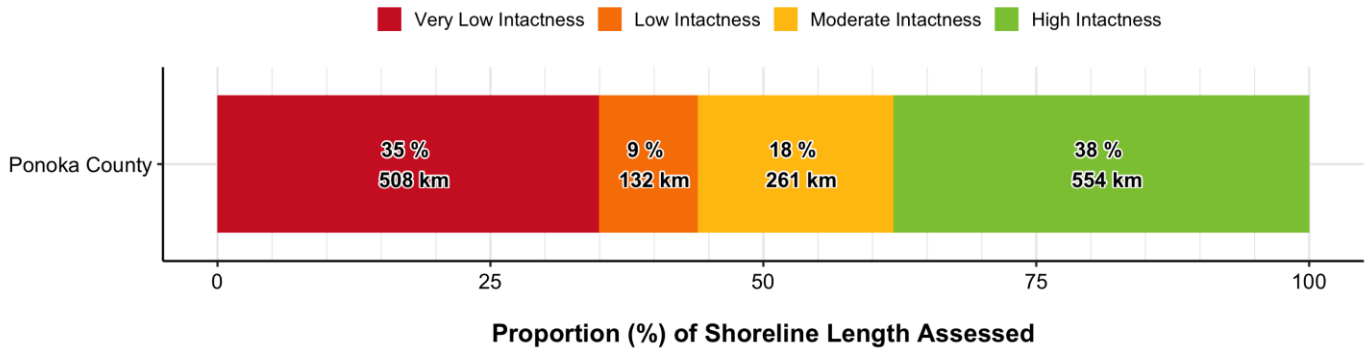

- Land Cover**
- Forest
 - Agriculture
 - Agricultural Depression
 - Wetland
 - Natural Grassland
 - Open Water
 - Natural Bare Ground
 - Built Up/Exposed
 - Disturbed Vegetation

1.4. Riparian Management Area Intactness

Overall Municipal Intactness

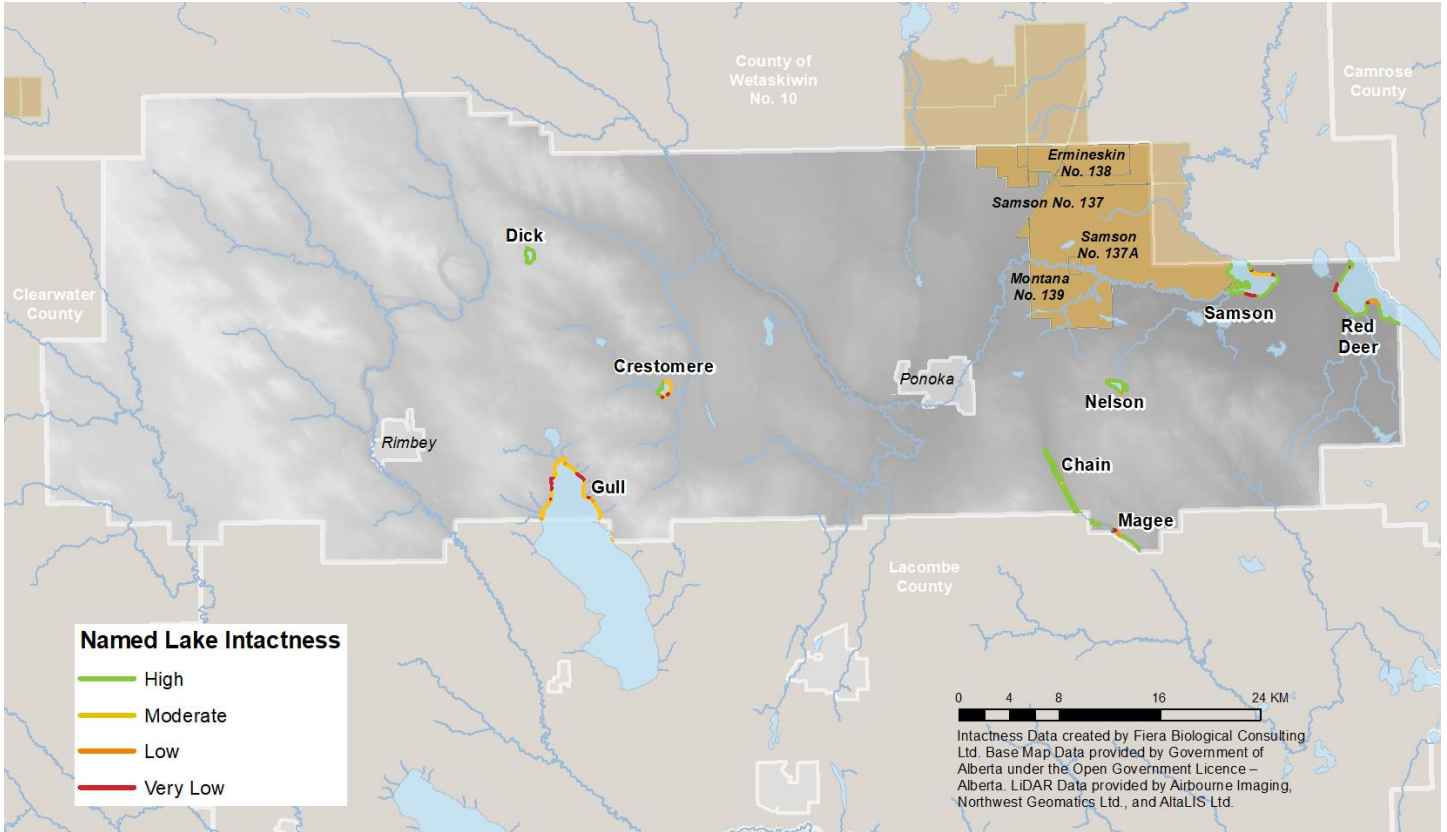

Intactness By Waterbody Type

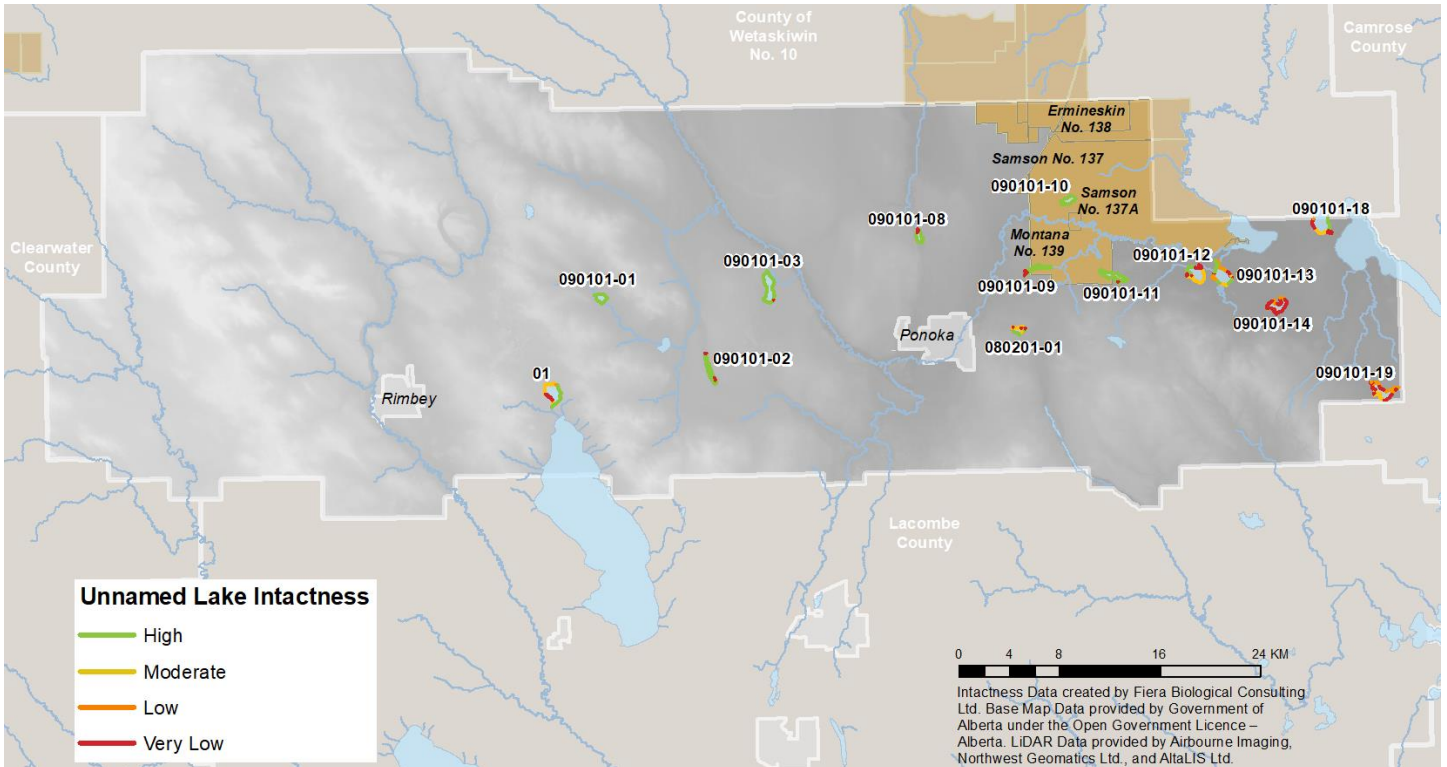

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category. Categories with no label contain <15 km of shoreline.

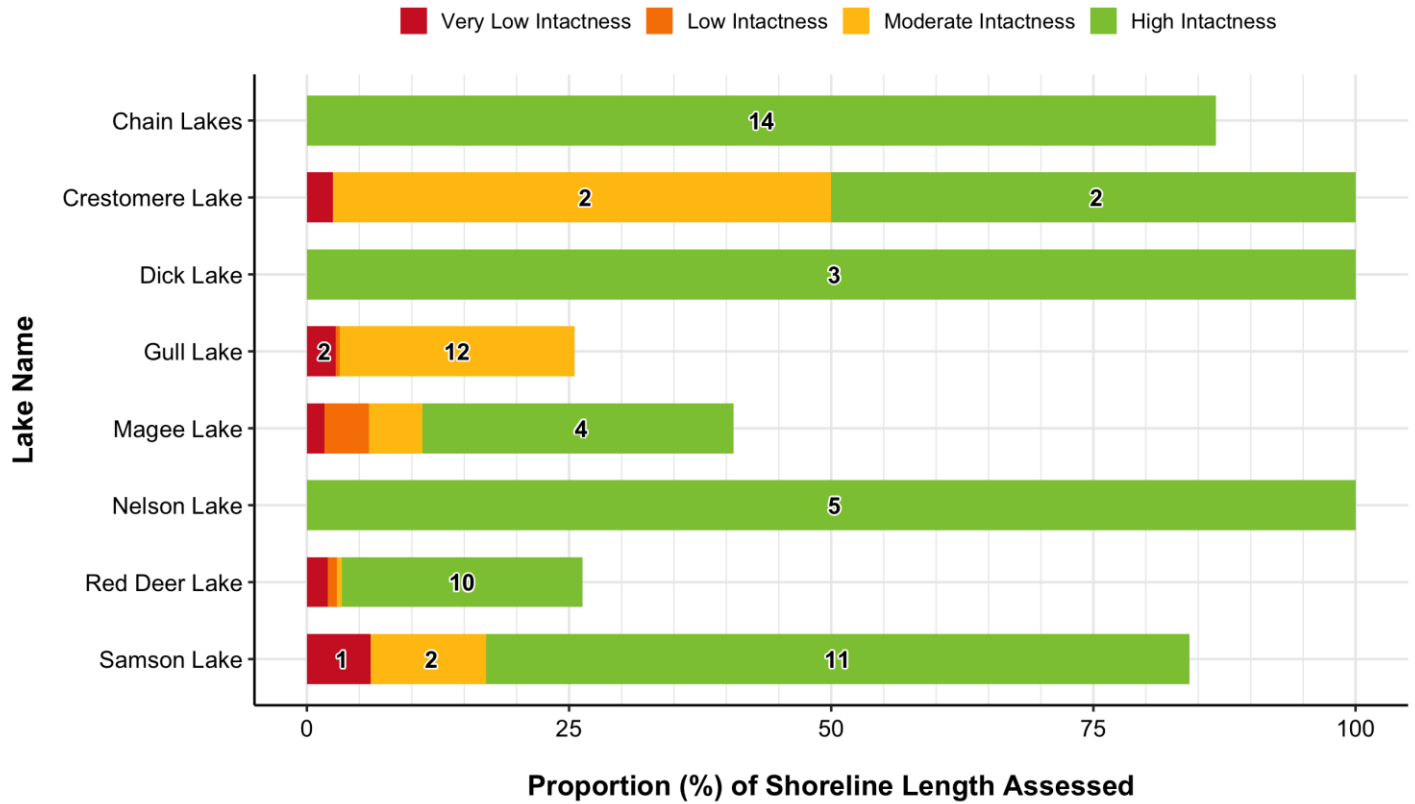

Intactness - Named Lakes

Intactness - Unnamed Lakes

Intactness - Named Lakes

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category. Categories with no label contain <1 km of shoreline.

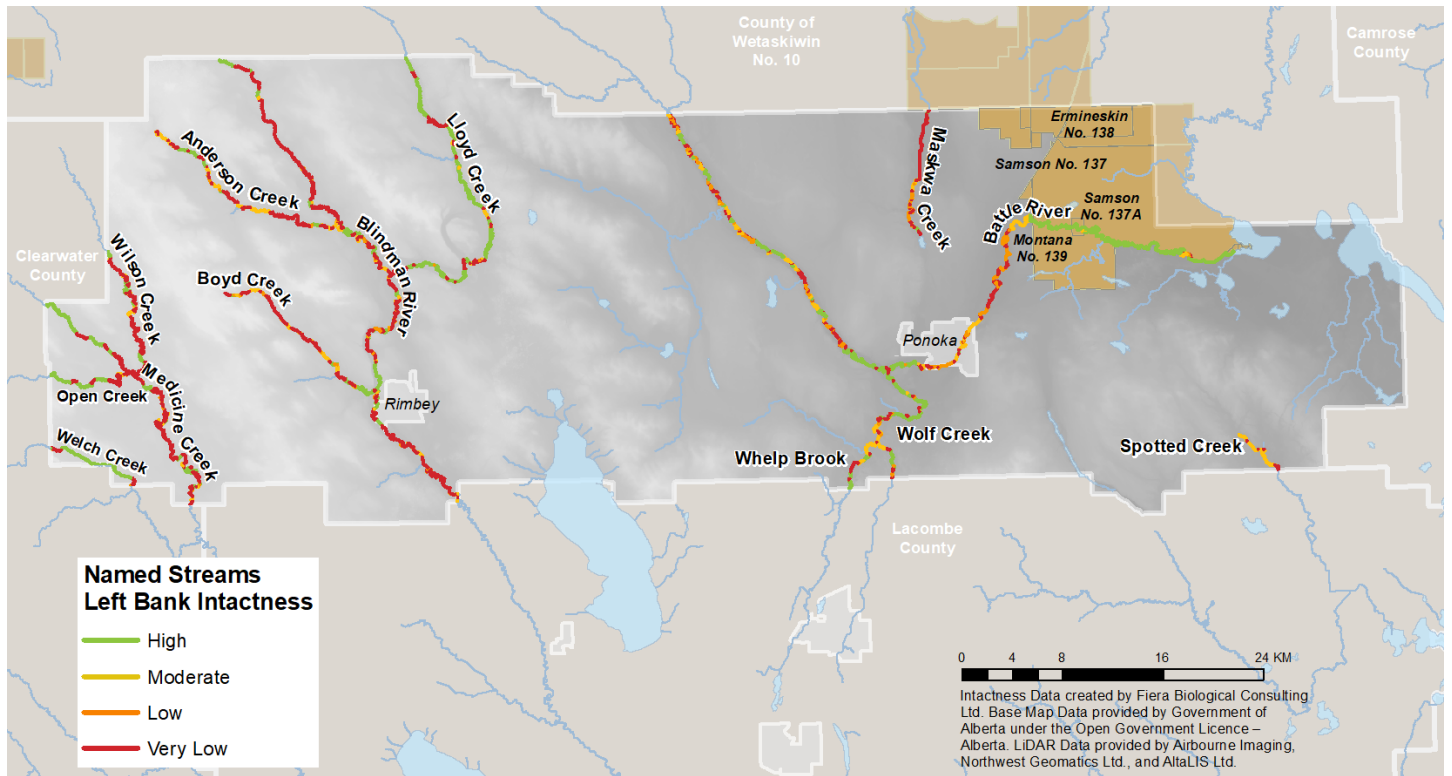

Intactness - Unnamed Lakes

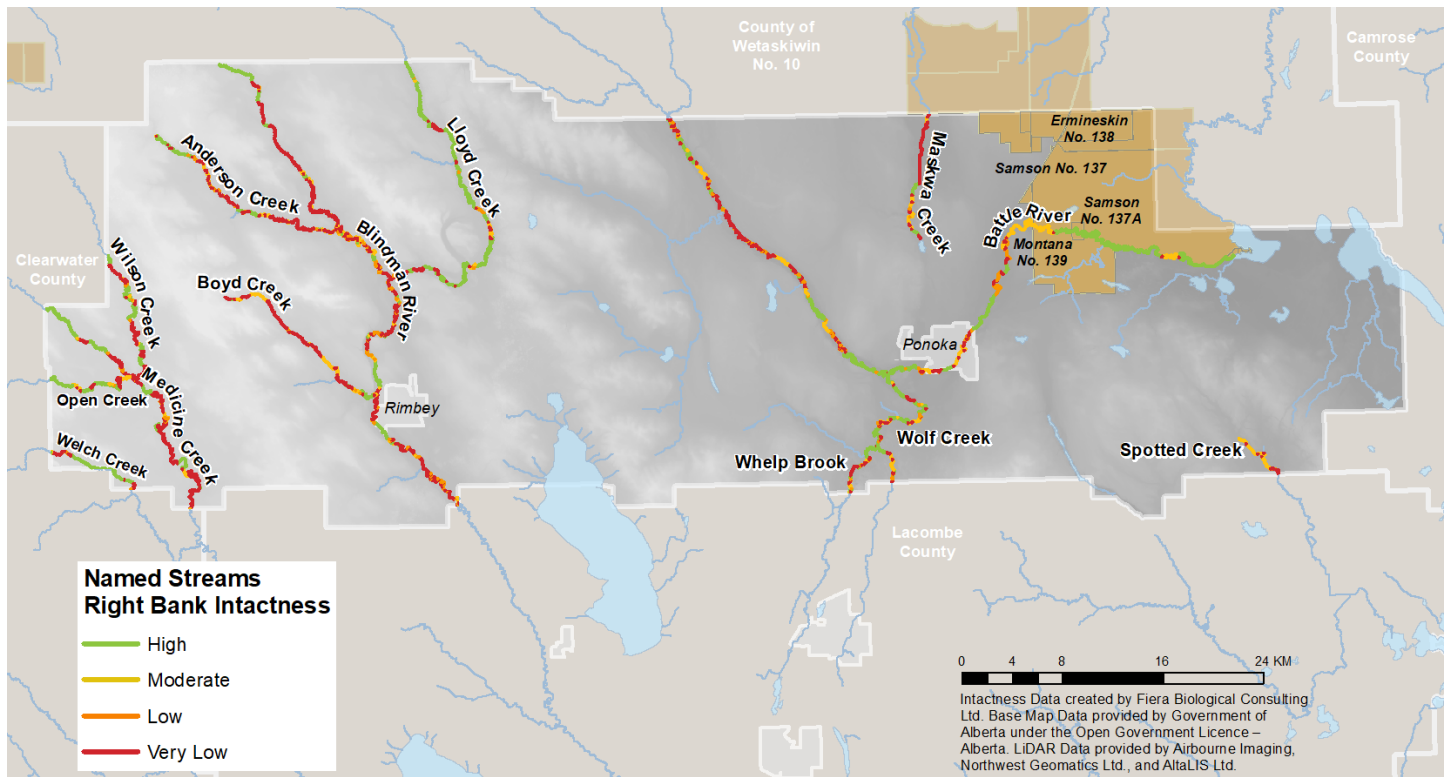

Proportion (%) of Shoreline Length Assessed

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category.

Intactness – Named Streams: Left Bank

Intactness – Named Streams: Right Bank

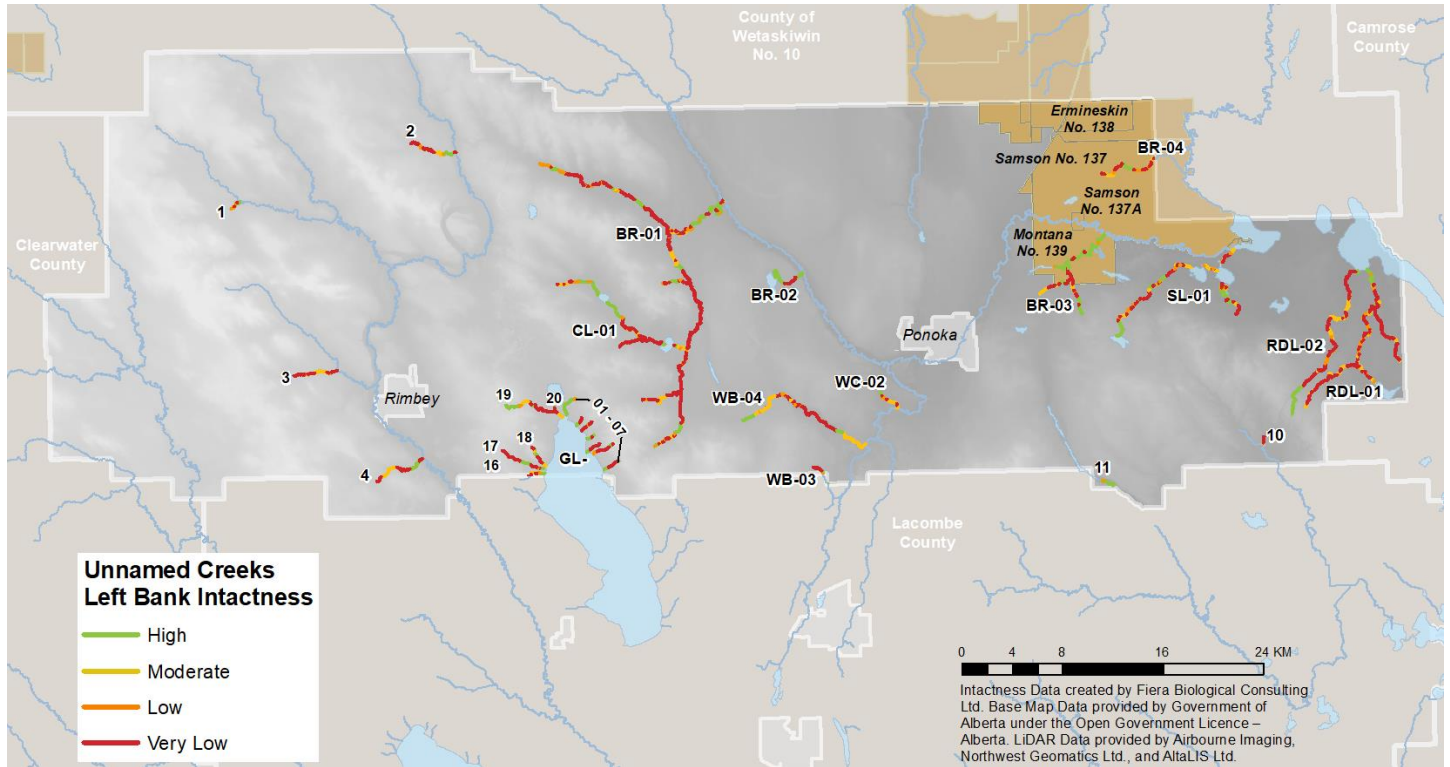

Intactness – Named Streams

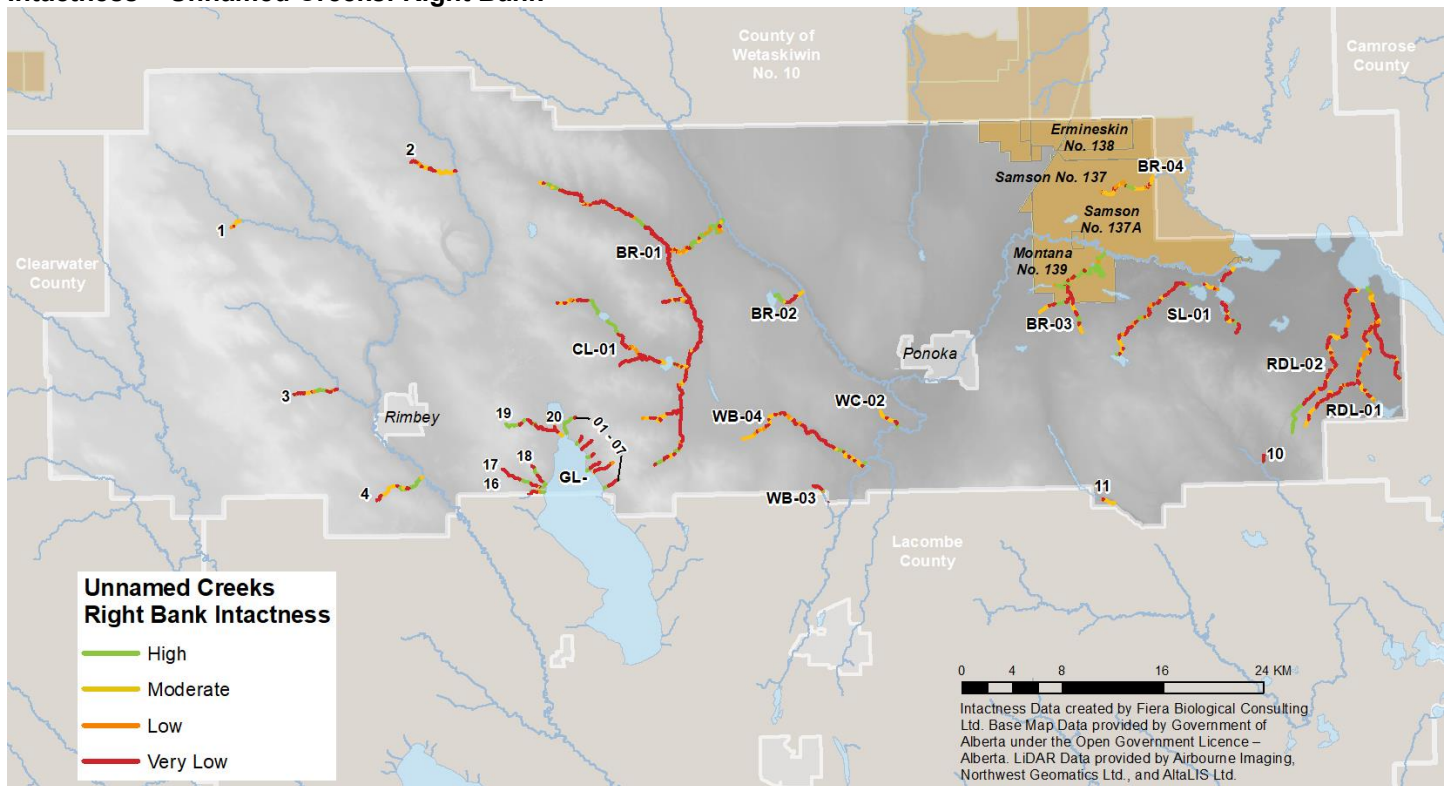

Proportion (%) of Shoreline Length Assessed

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category. Categories with no label contain <1 km of shoreline.

Intactness – Unnamed Creeks: Left Bank

Intactness – Unnamed Creeks: Right Bank

Intactness – Unnamed Creeks

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category. Categories with no label contain <1 km of shoreline.

Intactness – Unnamed Creeks Continued

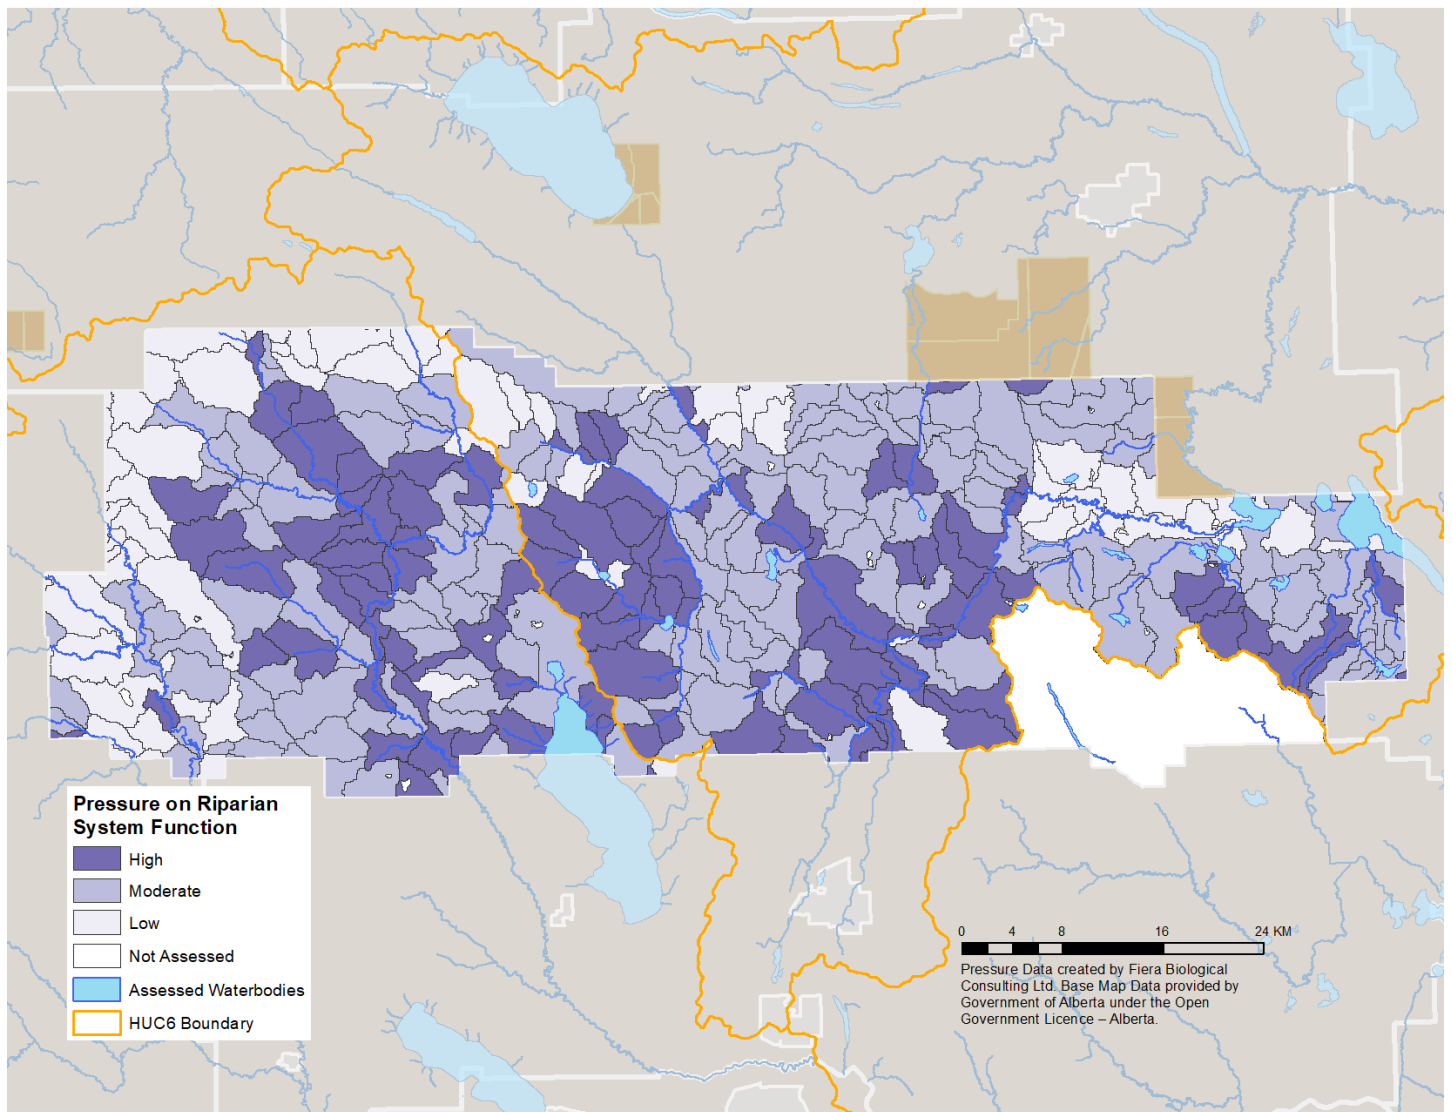

NOTE: Numbers indicate the total length (km) of shoreline associated with each intactness category. Categories with no label contain <1 km of shoreline.

1.5. Pressure on Riparian System Function

Overall Municipal Pressure

NOTE: Numbers indicate the proportion (%) of shoreline associated with each pressure category.

Pressure - Named Lakes

NOTE: Numbers indicate the proportion (%) of shoreline associated with each pressure category.

Pressure - Unnamed Lakes

NOTE: Numbers indicate the proportion (%) of shoreline associated with each pressure category.

Pressure - Named Streams

NOTE: Numbers indicate the proportion (%) of shoreline associated with each pressure category.

Pressure - Unnamed Creeks

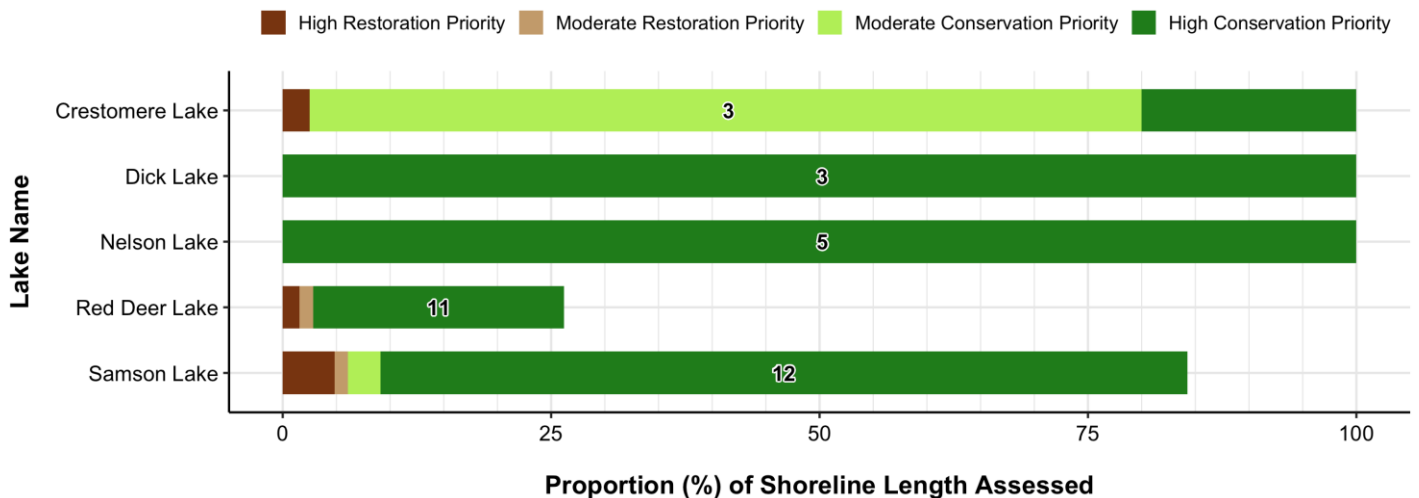

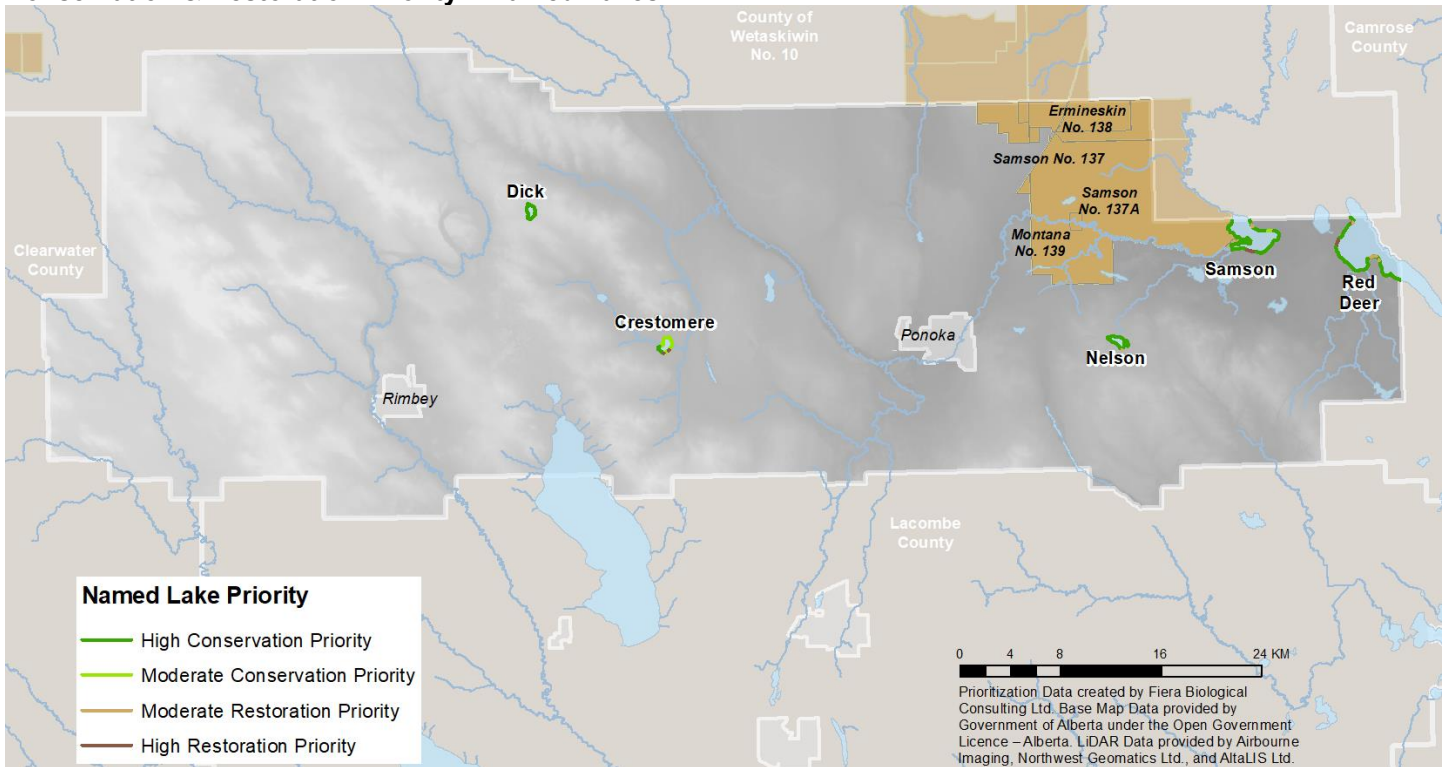

NOTE: Numbers indicate the proportion (%) of shoreline associated with each pressure category.

1.6. Conservation & Restoration Priority

Overall Municipal Conservation & Restoration Priority

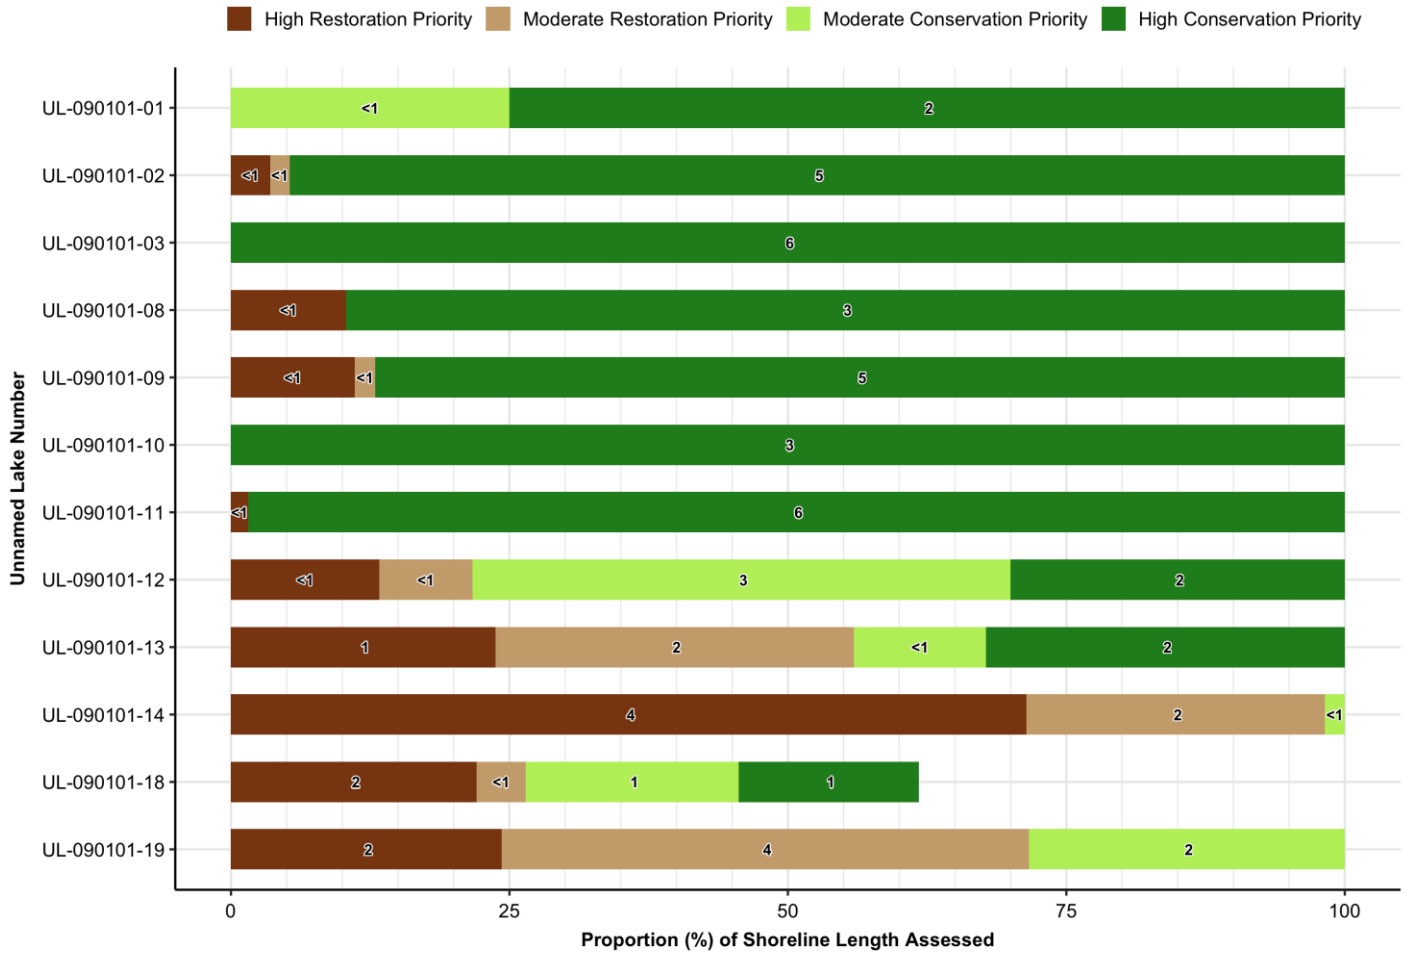

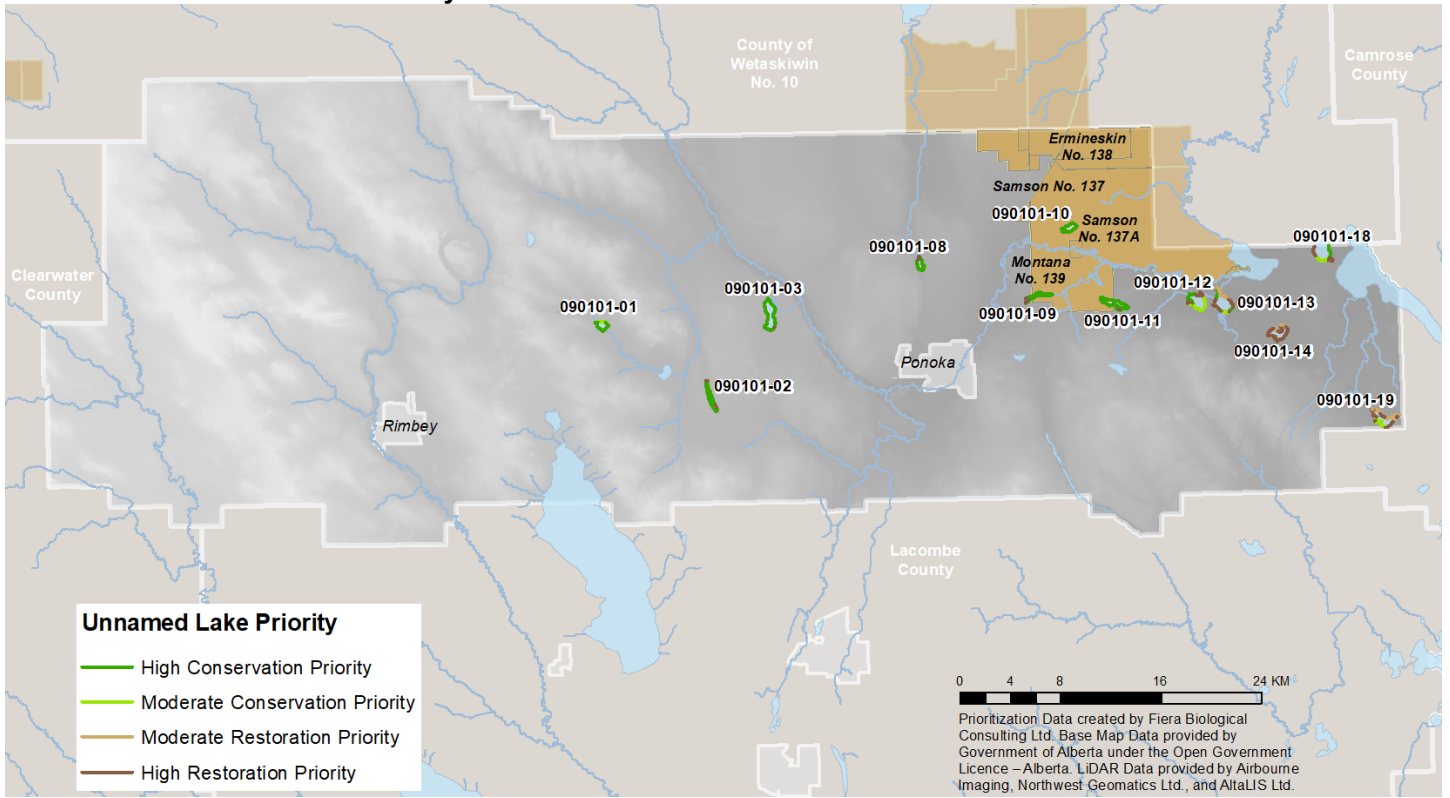

Conservation & Restoration Priority – Named Lakes

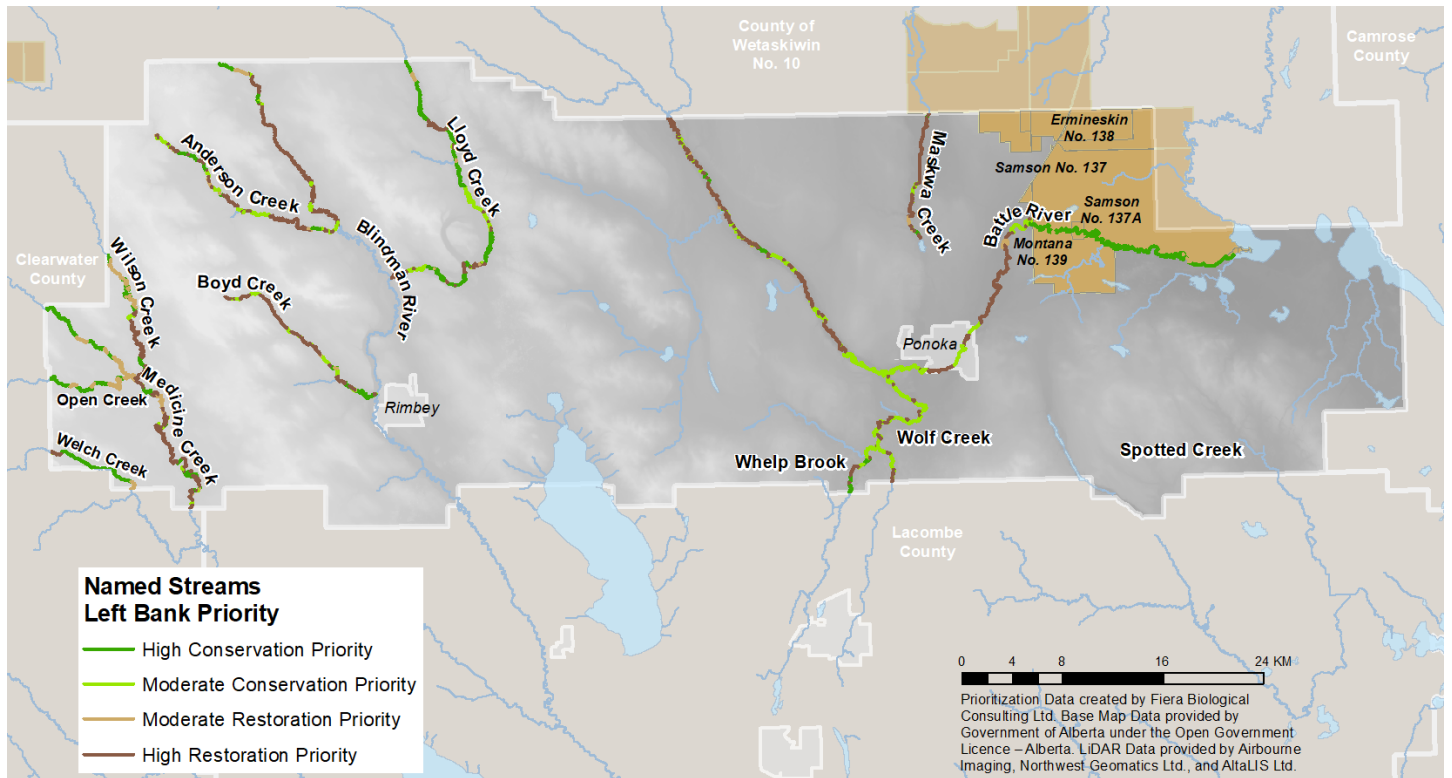

NOTE: Numbers indicate the total length (km) of shoreline associated with each prioritization category. Categories with no label contain <1 km of shoreline.

Conservation & Restoration Priority – Unnamed Lakes

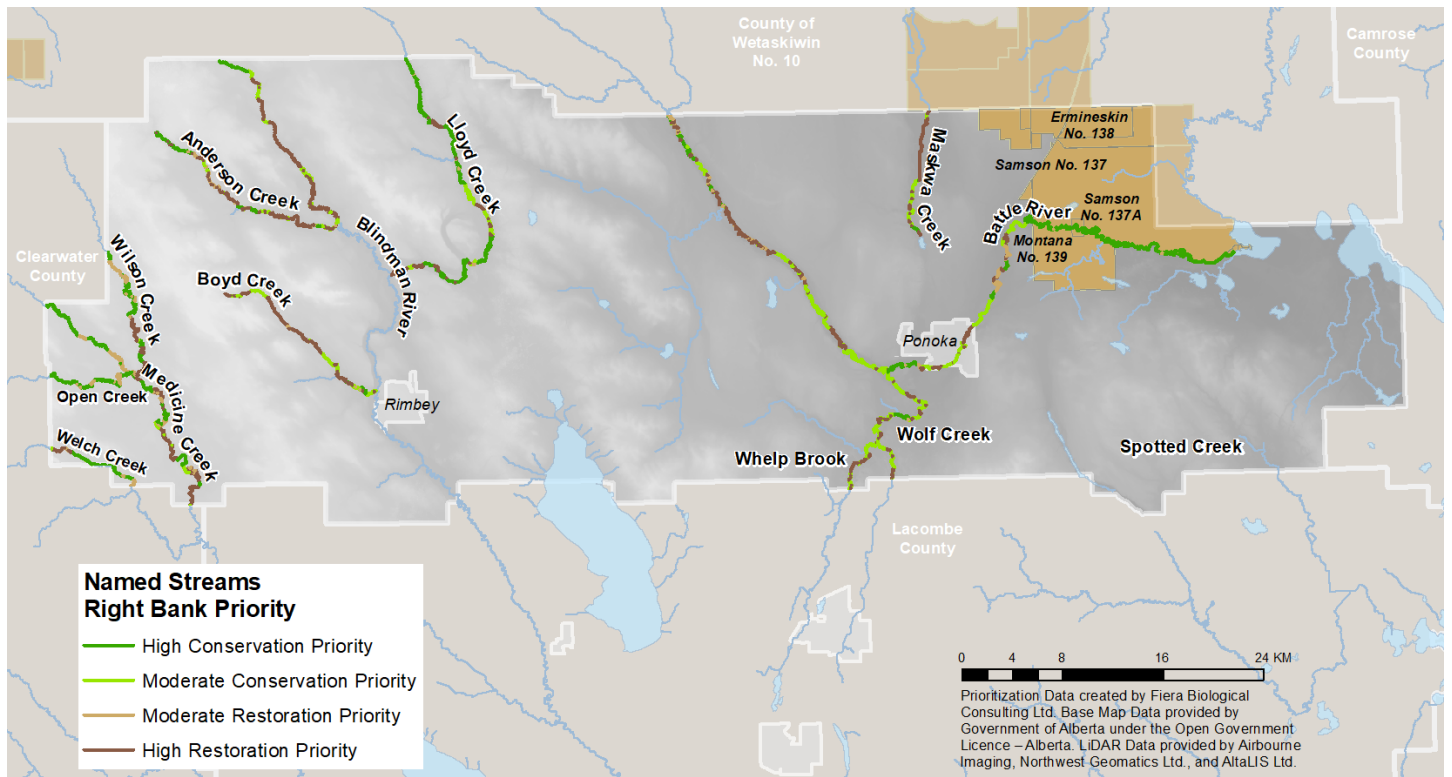

NOTE: Numbers indicate the total length (km) of shoreline associated with each prioritization category.

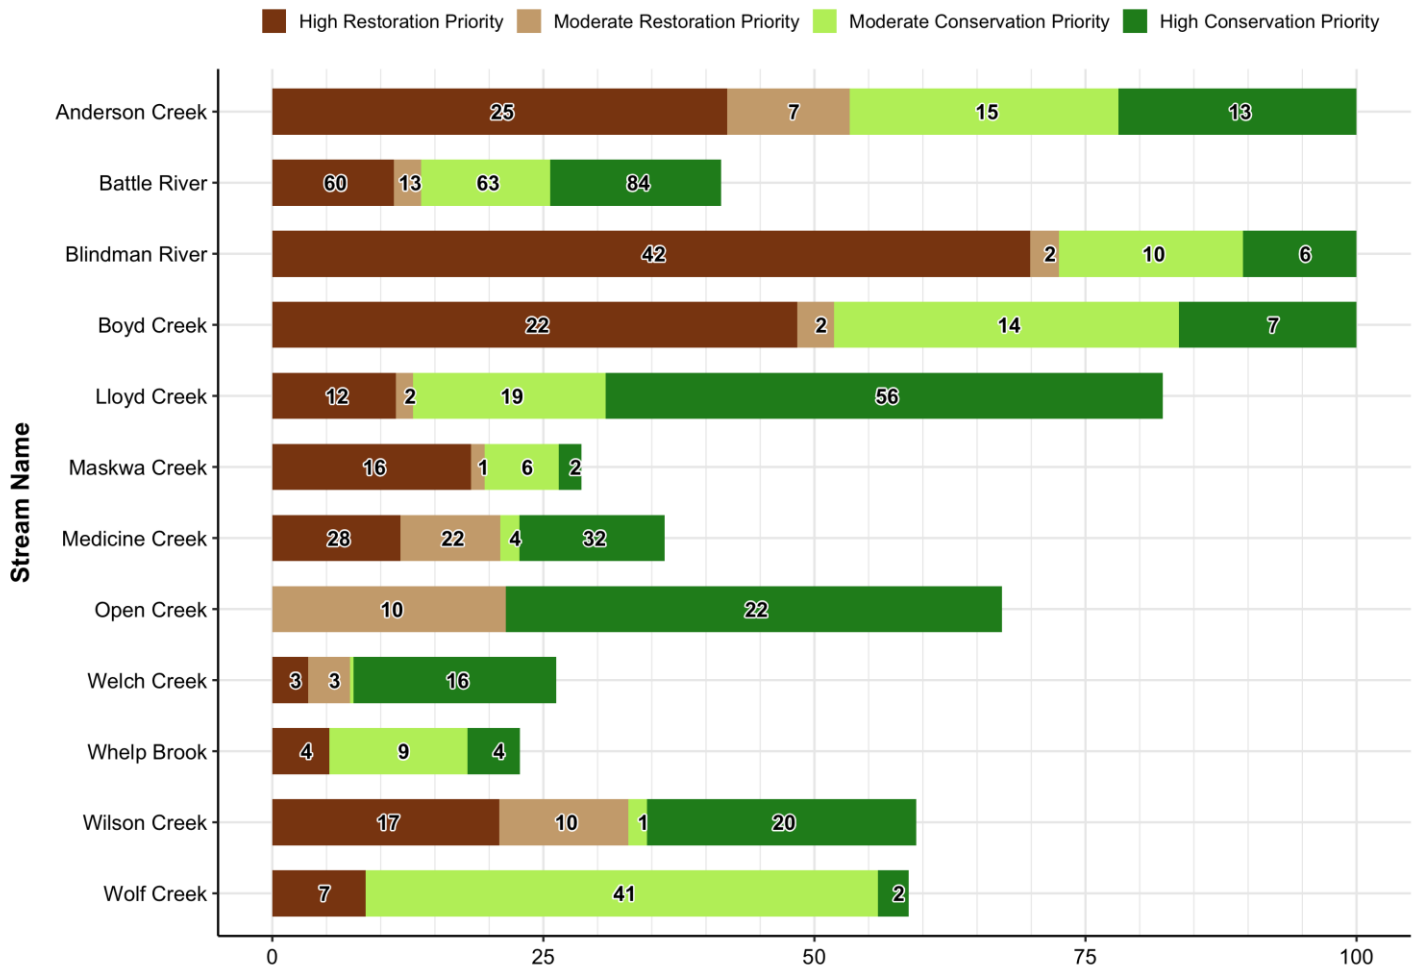

Conservation & Restoration Priority – Named Streams: Left Bank

Conservation & Restoration Priority – Named Streams: Right Bank

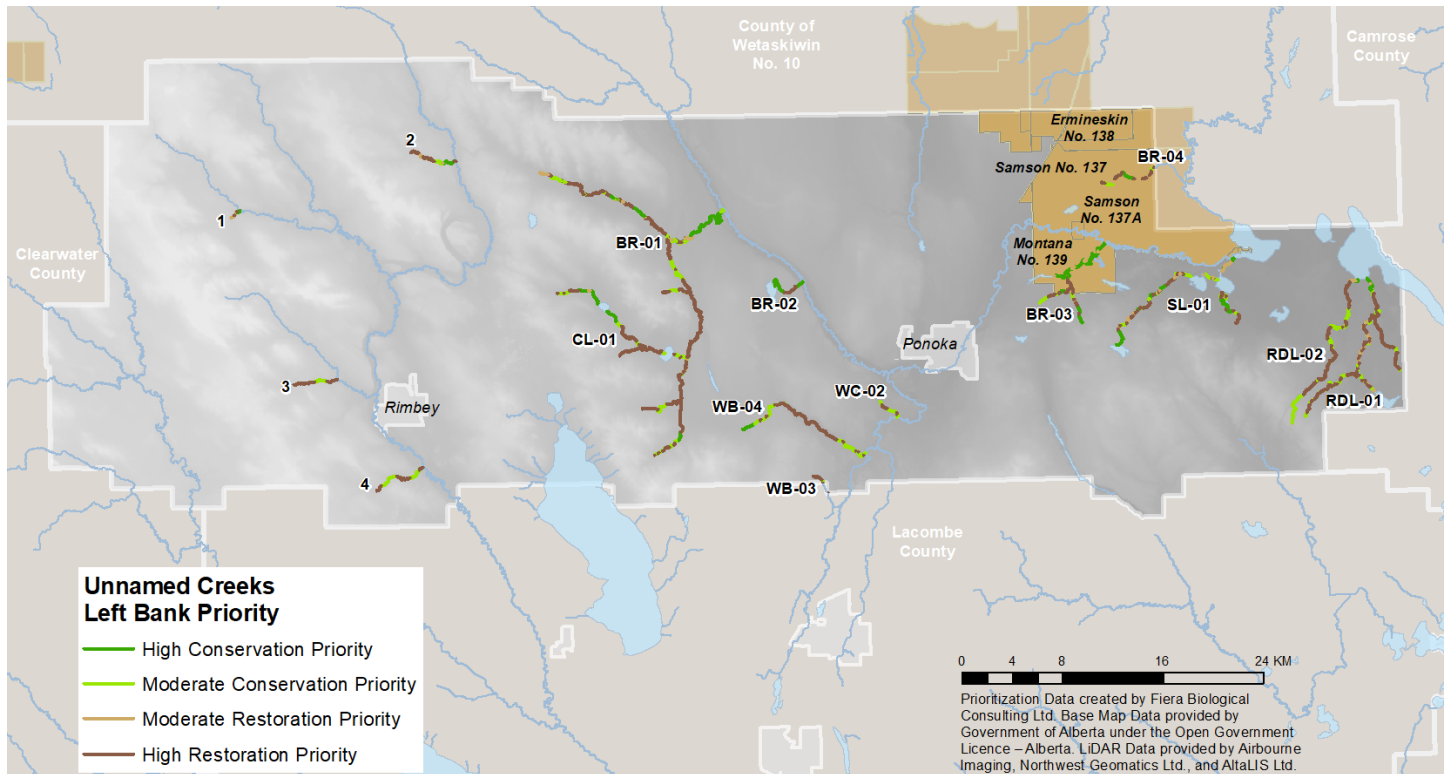

Conservation & Restoration Priority – Named Streams

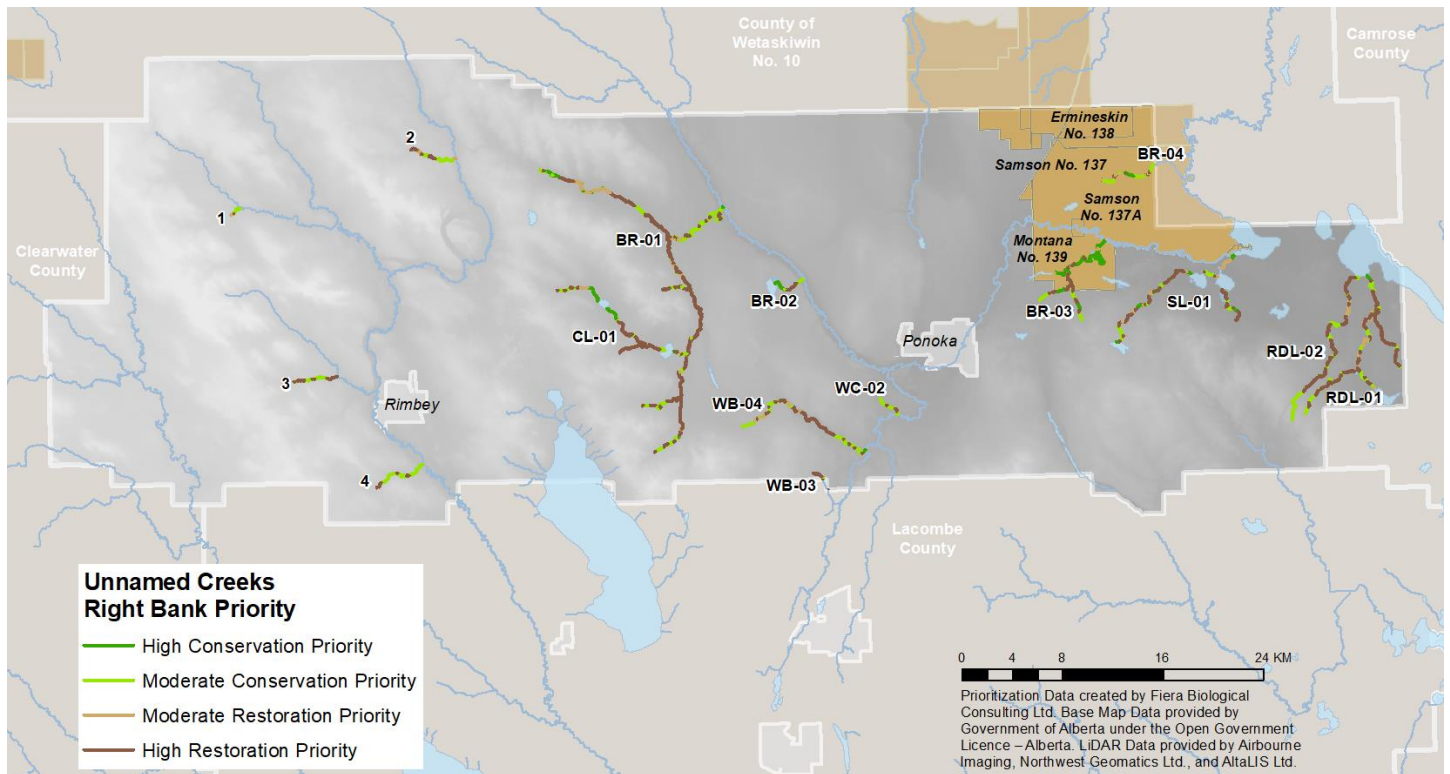

Proportion (%) of Shoreline Length Assessed
 NOTE: Numbers indicate the total length (km) of shoreline associated with each prioritization category.
 Categories with no label contain <1 km of shoreline.

Conservation & Restoration Priority – Unnamed Creeks: Left Bank

Conservation & Restoration Priority – Unnamed Creeks: Right Bank

Conservation & Restoration Priority – Unnamed Creeks
